

Doc for New installation of Voltmx in Standard Bank Environment -

Download required installer that is Iris 10.0.3 the latest for now.
In Windows App take the .exe file and install it. Default it shows the path in Program files, please go ahead.

After installation do the following steps -

Navigate to the default.js file in your IRIS installation directory:

C:\Program Files\Volt Iris\config\default.js

Open the default.js file and search for the line:

```
console.log('Loading[config]..' + \_\_filename);
```

Add the following line directly below it:

```
process.env.NODE_TLS_REJECT_UNAUTHORIZED = 0;
```

Save the file, restart IRIS, and then verify the Foundry connectivity.

Note: This step needs to be performed whenever we get the latest plugin.

To connect to Foundry need to do the following steps -
